Join the SLA webinar on keeping our workplace safe and accident-free

There has been a spate of workplace accidents in the logistics and transportation industry in 2021, some of which have resulted in fatalities and the issuance of stop-work orders for logistics companies. To prevent and/or minimise the occurrence of these unfortunate and avoidable incidents, the Singapore Logistics Association (SLA) will be organising a webinar with the support of the WSH Council and industry partners. The webinar will:

- Shed light on the workplace accidents that are prevalent in the logistics and transportation industry;
- Share practical safety measures for forklift operations;
- Share examples of company-led initiatives to improve overall safety management practices; and
- Highlight existing technologies to enable driver safety.

Date: 27 October 2021 (Wednesday)

Time: 10am – 11am

Venue: Zoom

WSH Dialogue on Electrical Safety reminds industry of safe practices when working with electrical equipment

Held on 21 October 2021, the WSH Dialogue on Electrical Safety aimed to remind the industry of safe practices on electrical safety and measures that companies can take to ensure a safe workplace for workers. More than 200 participants attended the virtual dialogue, organised by the Workplace Safety and Health (WSH) Council and supported by the Energy Market Authority (EMA).

Er. Yeo Cheng Hee, Deputy Director of the Inspectorate Department from EMA, kicked off the session with an insightful sharing on high voltage electrical maintenance and safety issues. He also shared important compliance and prevention measures which stakeholders would need to take note of and past case studies for learning.

The panel discussion saw a lively exchange and sharing of best practices and measures that could be implemented at the workplace. The panellists, which consisted of a diverse group of experts from fields ranging from the electrical field, WSH, academia and labour movement, shared the following key takeaways:

- **Do not be hasty** when completing work. **Think twice** as if each time is the first when carrying out tasks. Do not be complacent but be safe.

- **Avoid falling into a normalised routine or taking shortcuts.** Consider carrying out a 'last-minute' risk assessment so as not to miss any details.

- **Harness technology** to unlock more possibilities when carrying out maintenance work.

- **Upgrade yourselves constantly to build up your electrical core competencies and WSH knowledge** to remain relevant and be aware of the latest developments in the industry.
